

**Start your Journey.
Now.**

claranet[®]

How we support your Journey

Claranet is how public and private organisations can finally **make modern happen** no matter where they are in their technology journey.

- Technology, Transformation and Security Strategy
- Program and Change Management
- Solutions selection & fit-for-purpose evaluation

- Regardless of the typology and location of your workloads
- 24/7 Support
- Standard and Advanced Services
- Service Management

**Consulting
& Advisory
Services**

**Professional
Services**

**Managed
Services**

- Solution Architecture and Design
- Solution Development Services
- Hardware and Software solutions implementation
- Managed Services Transition

Journey To Cloud

Program & Project Management Services

- Ensure value delivery and program coordination, oversee project management, manage KPIs, audit and reporting

Strategy & Roadmap

- Assess Current Infrastructure
- Identify Business Objectives
- Evaluate Cloud Options
- Develop a Comprehensive Cloud Strategy and Roadmap

Migration and Deployment – Cloud Migration Factory

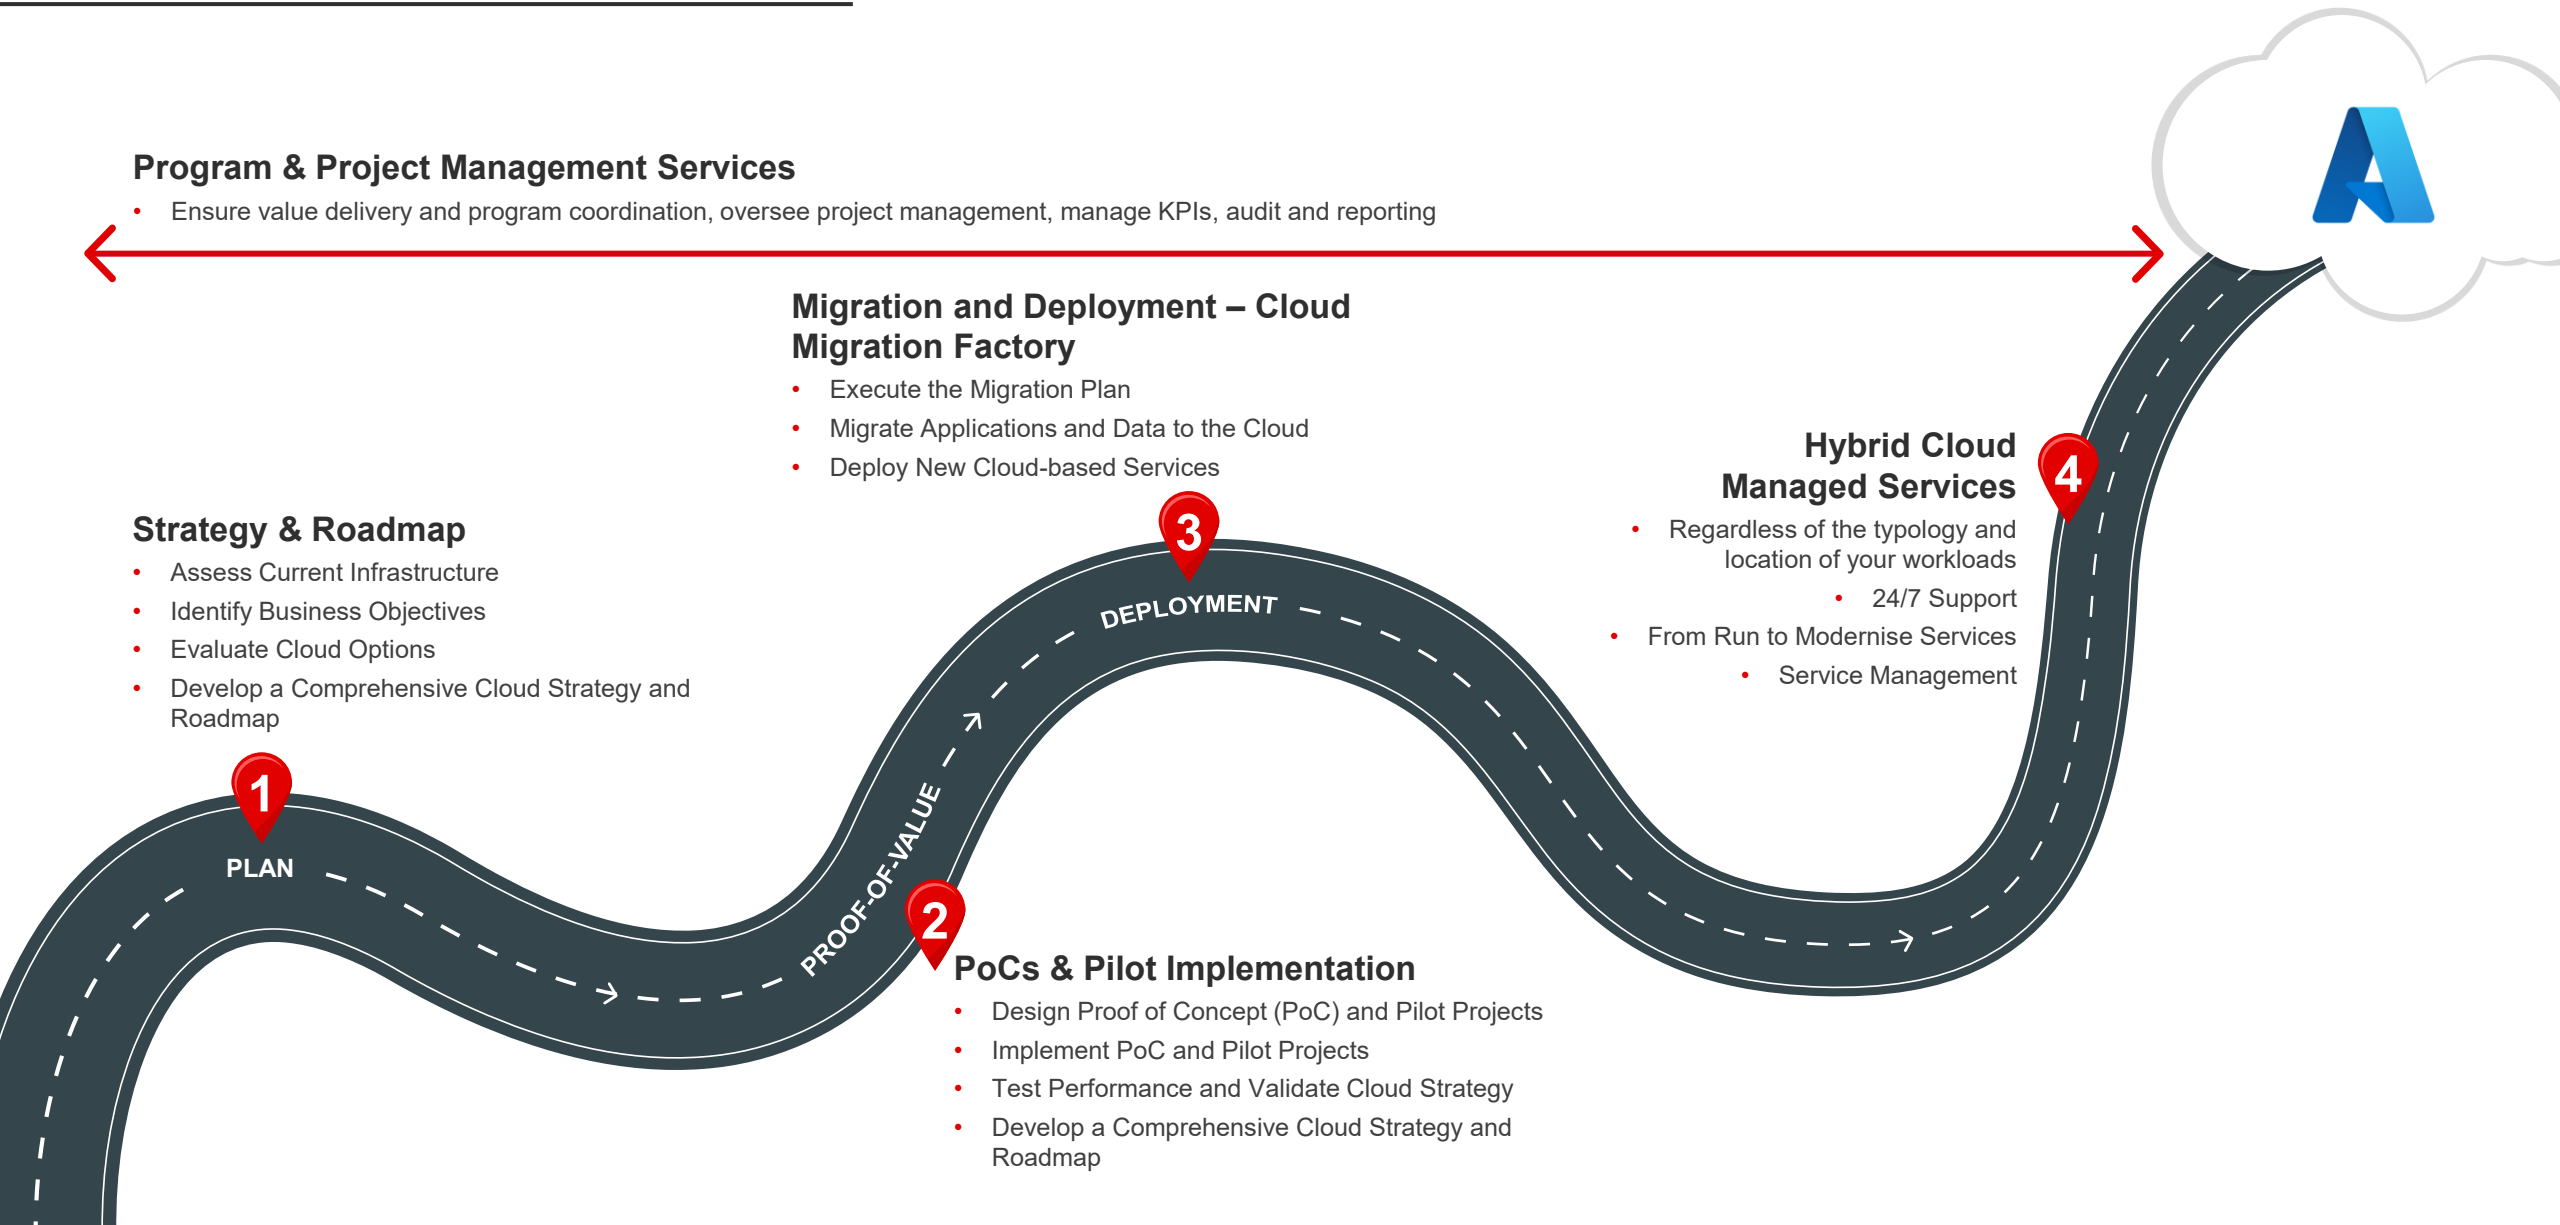

- Execute the Migration Plan
- Migrate Applications and Data to the Cloud
- Deploy New Cloud-based Services

Hybrid Cloud Managed Services

- Regardless of the typology and location of your workloads
 - 24/7 Support
- From Run to Modernise Services
 - Service Management

PoCs & Pilot Implementation

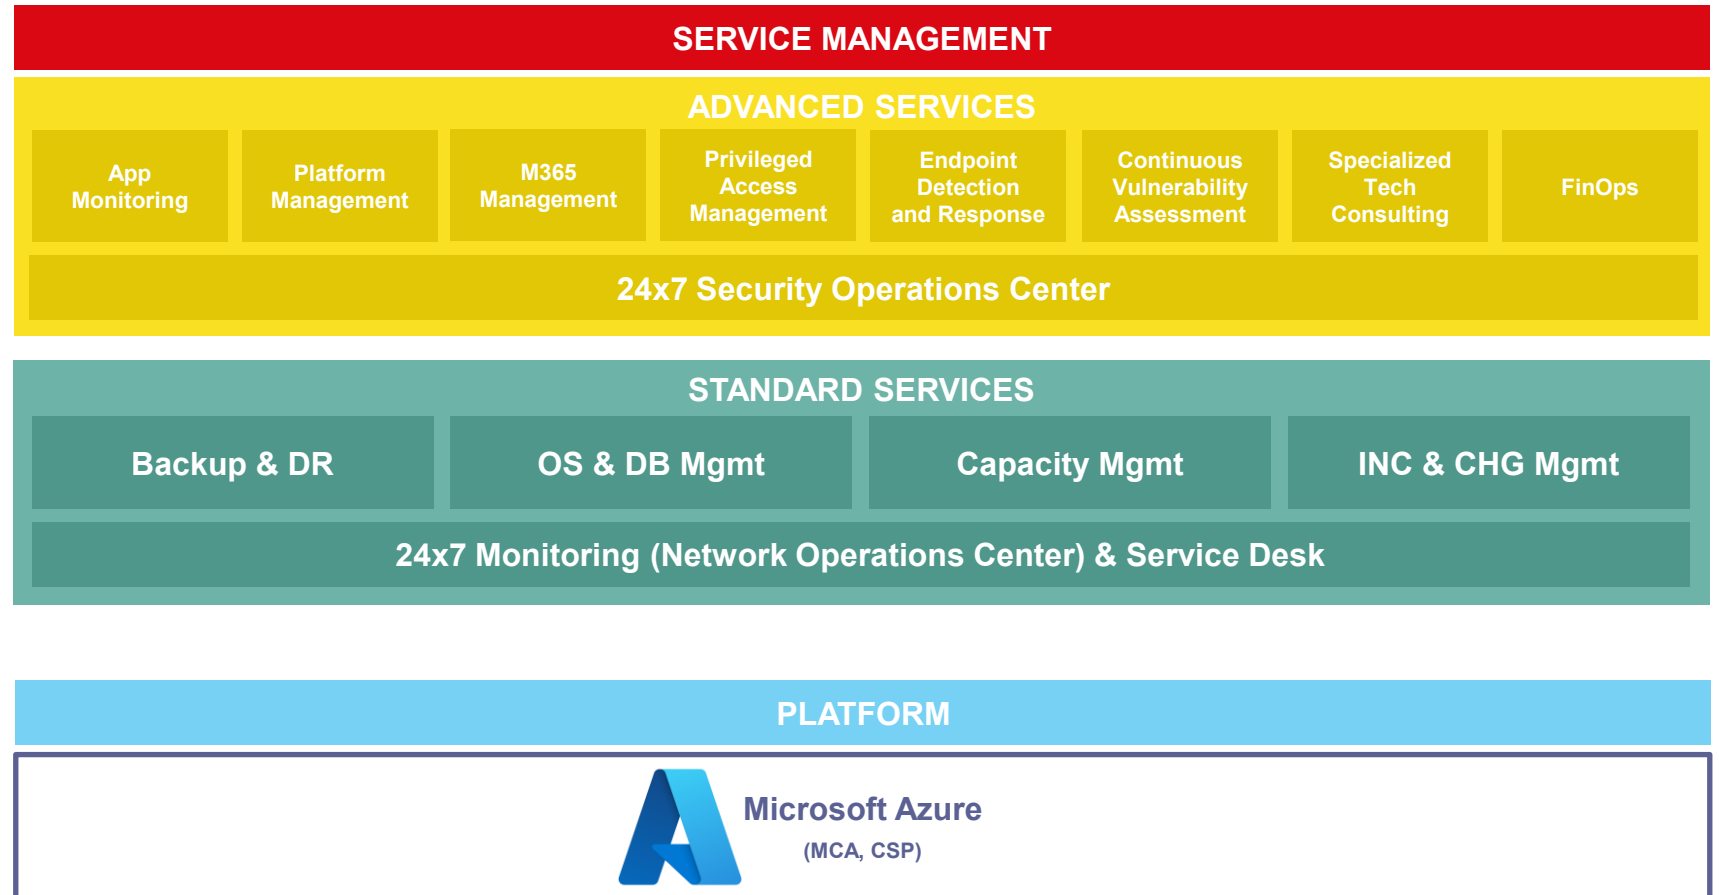

- Design Proof of Concept (PoC) and Pilot Projects
- Implement PoC and Pilot Projects
- Test Performance and Validate Cloud Strategy
- Develop a Comprehensive Cloud Strategy and Roadmap

Your Managed Services Provider

IN

Responsible for provision and management “in” the infrastructure

OF

Responsible for provision and management “of” the infrastructure

Use Case: Migration to Cloud

Client Fingerprint	Sector	Type of Collaboration
Industrial Equipment	Industry	Migration to Cloud & Managed Services

Context, Objectives / Challenges:

The customer operates in various locations throughout Europe, with their ERP system hosted in a data center in Portugal. They aimed to migrate their platform to establish a more robust and centralized infrastructure, bringing it closer to their office branches to decrease latency and enhance user experience.

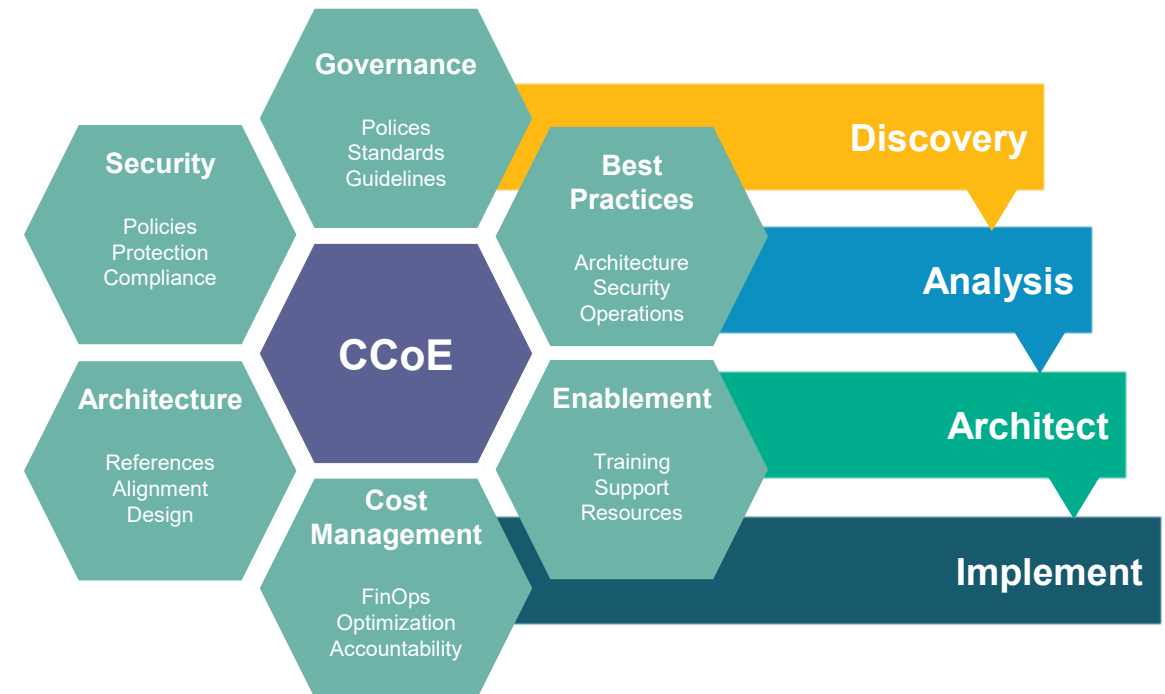

Several challenges arose, including a deficiency in expertise and the capacity to manage the infrastructure. However, the most significant hurdle was that it was a 24/7 operation, leaving only a limited maintenance window for the migration process.

Approach / Proposed Solution:

Claranet successfully delivered a project grounded in best practices like the Cloud Centre of Excellence (CCoE), where we identified potential bottlenecks, performance needs, and the capability to migrate the entire infrastructure to Azure within the necessary timeframe. We offered processes and tools designed to streamline the management and upkeep of Azure, guaranteeing high availability, security, and optimal performance for their applications and services.

Benefits Provided to the Client:

- ✓ Scalability and flexibility
- ✓ Improved operational efficiency
- ✓ Enhanced security and compliance
- ✓ **Cost Savings, Business Continuity**
